

Aircraft bring us to the most beautiful places on earth. However, at the same time aircraft are a threat to all this beauty because of the CO₂ and other emissions that they produce.

GreenSeat makes it possible for you to compensate the emissions related to your flight through renewable energy projects and the planting and protection of forests. Trees use CO₂ to grow, thus taking it out of our atmosphere! Furthermore the forestry projects provide employment and education to local communities.

At www.GreenSeat.com you can quickly calculate the number of trees required to make your seat 'green'. For destinations less than two hours flying away, a GreenSeat will cost you no more than 10 Euro! A small price to pay to take care of your emissions!

Make YOUR seat a
green seat!

GreenSeat

www.GreenSeat.com

How does it work?

On the website www.GreenSeat.com you can calculate the emissions related to your flight by entering a few basic flight details. The emissions in turn determine the number of trees required to compensate your flight. After payment you will receive your personal [GreenSeat](#) certificate.

The [GreenSeat](#) forestry projects are set up and managed by the Face Foundation. Face has projects in the Czech Republic, Uganda, Ecuador, Malaysia and the Netherlands.
